GNU nano 8.1ssh\_config

# This is the ssh client system-wide configuration file. See  
# ssh\_config(5) for more information. This file provides defaults for  
# users, and the values can be changed in per-user configuration files  
# or on the command line.  
  
# Configuration data is parsed as follows:  
# 1. command line options  
# 2. user-specific file  
# 3. system-wide file  
# Any configuration value is only changed the first time it is set.  
# Thus, host-specific definitions should be at the beginning of the  
# configuration file, and defaults at the end.  
  
# Site-wide defaults for some commonly used options. For a comprehensive  
# list of available options, their meanings and defaults, please see the  
# ssh\_config(5) man page.  
  
Include /etc/ssh/ssh\_config.d/\*.conf
